Research Experience for Undergraduates
Partial Differential Equations and Dynamical Systems

at Florida Institute of Technology
Summer 2016
Principal Investigator: Professor Ugur G. Abdulla

You will have a great opportunity to pursue hands-on, original research on the frontier of modern mathematics. You will be equipped with intuitional and rigorous proof skills which allow you to tackle cutting-edge open problems in applied mathematics.

Research directions:
- Nonlinear partial differential equations
- Optimal control and inverse problems for systems with distributed parameters
- Dynamical systems and chaos theory

- Application process opens in January 2016
- Stipend $4,000
- Housing provided
